CAREER OBJECTIVE

A motivated engineering graduate seeking opportunities to work in a challenging environment. I wish to apply engineering principles to real-world projects and enhance my technical skills. My goal is to grow along with the organization.

EDUCATION

(B.E)- Computer Science Engineering

2022-2026

Dhanalakshmi Srinivasan Engineering College, Perambalur

SKILLS

- **Programming Languages:** Python, C++, C
- **Embedded & AI Systems:** Machine Learning, Edge AI, Data Science, Cyber Security, Computer Networking, IoT
- **Full-Stack Web Tech:** React, TypeScript, Vite, Supabase, API Integration, Tailwind CSS, Node.js
- **Tools:** Git, GitHub, Adobe Photoshop, MS Office

INTERNSHIP

AI Engineer Intern – Sortyx Venture Pvt, Chennai

- Developed full-stack features, web dashboards, and automation workflows to process real-time sensor data and track system.
- Integrated embedded hardware with machine learning by deploying edge AI models and configuring I2C communication protocols for microcontrollers.
- Utilized embedded computer vision, cloud-connected microcontrollers, and full-stack web technologies to build tracking systems.

Cyber Security Intern – Retech Solution Pvt, Chennai

- Identified and mitigated system vulnerabilities by executing hands-on threat analysis and risk assessments.
- Conducted digital forensics, image analysis, and geolocation mapping to extract evidence for investigations.
- Utilized specialized cybersecurity frameworks and cryptographic tools to implement robust system protection mechanisms.

PROJECT

Electronic Nose for Evaluating Seafood Freshness Using Machine Learning

- Designed and built an electronic nose system that processes volatile gas sensor array data to automate seafood freshness evaluation.
- Applied machine learning classification algorithms to extract key features from sensors and predict precise quality levels.
- Utilized Python and specialized data science libraries to execute data preprocessing and performance validation.

Water Monitoring System

- Designed and developed an interactive dashboard to monitor real-time sensor metrics and track environmental.
- Implemented core application logic and workflows to visualize critical data metrics efficiently.
- Utilized React, TypeScript, and Vite for building the web application framework, integrated with the Gemini API.

Online Fingerprint Voting System

- Designed an online voting system with fingerprint authentication to ensure election security and prevent duplicate votes.
- Built interactive dashboards for real-time poll creation, candidate management, and live election results tracking.
- Developed the application using React and TypeScript on the frontend, integrated with Supabase for backend storage and database logic.

CERTIFICATES

- **Cyber Security Basics** - Guvi
- **Mastering Black Hat Techniques: Guide to Hacking & Cyber Security** - Udemy
- **ADCP- C,C++,Python** - Cadd Cae Computers
